

Department of Building Safety
V-Zone Design site fill and no adverse impact certification

Pre-Construction- _____

Post Construction_____

Property Address: _____

In accordance with City of Folly Beach Code of Ordinances, Chapter 152, I hereby certify that any excavated materials or fill materials on the property will not be used as structural support and that any non-compacted fill used around the perimeter of the structure, will wash out from storm surge prior to generating excessive loading forces, ramping effects, or wave deflection. I certify as well that a landscaping/aesthetic fill grading and drainage plan has been analyzed and the following factors have been addressed:

- a). Particle composition of fill material does not have a tendency for excessive natural compaction.
- b). Volume, distribution, and grading of material will direct storm water run off to the storm water drainage system and will not cause adverse impact to adjacent properties.
- c). Volume, distribution, and grading of fill materials will not cause wave deflection to adjacent properties.
- d). Slope of fill will not cause wave run-up or ramping.
